### Purpose of Inspection:

This inspection was conducted jointly with Chris Crockett of Wildlife Resources.

### Inspection Summary:

During the inspection the fuel tank on the barge was inspected by removing the cap. There was a smell of petroleum product when vented. A liquid was seen in the bottom of the tank. The main concern is what could happen to the petroleum product in the future.

A battery was also on the barge. In addition there is a bucket of with unknown fluid in it. While things appeared stable there is the long range concern about what could happen to the petroleum products and battery acid.

There are two fuel tanks on the ground. Using the thump test the tanks appear to be empty.

There a dragline on the site. On the right rear track there appears to be an oil stain. There is also a bucket with unknown fluid.

**Conclusions and Recommendations:**

There is no bond on the site, the Permittee did not respond to the Cessation Order.

The Division should make a decision about doing the reclamation work on the site. The main concerns are removing fluids and other potential pollutants from the site.

**Inspector's Signature**

WHW

cc: (OPERATOR)

A handwritten signature in blue ink, appearing to read "Wayne White", is written over a horizontal line.
